Subject: Hello

Hello,

I am a citizen of Callaway County asking for a moratorium ordinance and insist that our county commissioners deny any and all types of tax abatement to ANY data center corporation. At the very least you owe the citizens that you serve a real chance to ask very serious questions and concerns. And, no, I do not feel what CrusoEU put on was any actual real explanation for their unsavory actions. For example, everyone, even CrusoEU and sitting County commissioners seem to be completely ignoring the very real concerns and permanent damage that these hyperscale data centers are already causing in other locations across the country. I keep asking why nobody will discuss the severe repercussions that come with the use of a closed loop cooling system? Anytime I mention PFAS chemicals (forever TOXIC chemicals) people even from CrusoEU act ignorant. But the PFAS chemicals are used in the closed loop cooling system. So if they truly understand the system they're discussing then they know the very real hazards. Just the sound damage alone is very concerning. If the county commissioners truly have nothing to hide then please setup a public meeting place where citizens can voice real questions and and concerns. If you're going to sell the county citizens out and permanently damage air, sound, land and drinking water for multiple generations then just have the common decency to tell us to our faces and allow us to ask why you all had been doing this in secret? Would any of you told us county citizens of this hyperscale Ai data center if it had not gotten leaked? Thank you for your time
