Subject: Urgent Concerns Regarding Proposed Data Center in Callaway County MO

Dear Commissioner Scott,

I am a resident of Fulton, Missouri and I am writing to formally express my opposition to the proposed data center project in Callaway County.

While I support economic development, I believe this specific project poses significant risks to our community.

My concerns include:

1. **Environmental Impact:** The potential for excessive water consumption and noise pollution from cooling systems and generators.
2. **Grid Reliability:** The immense energy demands could cause utility rates to rise for local residents.
3. **Land Use:** This project does not align with the rural/residential character of our area, disrupting agricultural land and local wildlife.

While these facilities provide tax revenue, they are intense industrial users that require careful regulation to be "good neighbors". At a minimum, please consider the following when evaluating new proposals:

- * Mandating noise mitigation: Restricting chiller operations to meet noise limits at property lines.
- * Environmental Protection: Prohibiting projects in floodplains or areas with high water tables, and regulating water and electric usage such that it does not impact the availability or costs of these basic utilities for the citizens of the surrounding communities.
- * Thermal Pollution Study: Evaluating the impact of "heat domes" on surrounding agriculture.

I urge the commission to reject this proposal or, at minimum, institute a moratorium to conduct a comprehensive impact study.

Sincerely,
Mark Huff
Fulton, MO 65251
