Josh,
I wanted to reach out again and invite you to come have a face-to-face discussion regarding your concerns over the proposed data center development. I would appreciate the opportunity to hear directly from you on the topic.

If you are still interested in the discussion, please contact our Commission office using the contact info below to setup a meeting.

Subject: Re: Northern Callaway Data Center Project

Josh,

Thank you for your email, for your thoughtful questions, and for your interest in the data center discussions. I would much prefer to have a conversation with you in my office or via telephone, rather than exchanging such long multi-topic emails.

I definitely want to address all of your questions to the best of my understanding and ability.

Would you be available to meet with me here in the County Courthouse next Monday 6/22 at 11:00am or 1:00pm? If these times do not work or if you prefer a phone call, please let me know your best availability.

Subject: Northern Callaway Data Center Project

Good afternoon,

I was unable to attend yesterday's data center meeting; however, I was able to watch the recap and have several questions following the meeting.

I am seeking information not only about the proposed project (even if it is still in the early stages), but also about the commission's plans to address the potential impacts of the project on the community.

1. What does the commission anticipate the long-term effects on property values will be?
2. What are the anticipated environmental impacts of this type of construction and operation (e.g., effects on local wildlife, waste removal, light pollution, noise pollution, and potential health concerns for local residents)?
3. What studies or research has the commission conducted regarding the potential impacts of the data center? While I understand commissioners have visited a data center in Texas, what independent or unbiased research has been completed, or is planned, to

ensure that local residents' interests are protected?

4. Commissioners traveled to Texas to view a data center. Was this trip funded by the data center company, or was it paid for by the commission or individual commissioners?
5. The commission has invested time and resources to visit a data center in Texas, yet there appeared to be no answer regarding water allocation priorities in the event of a severe drought. Has the commission begun coordinating with the local water district and electrical cooperative to address these types of issues? If not, what is the timeline for doing so?
6. What plans are in place to address road conditions during and after construction? Who will be responsible for the associated costs, Crusoe or local taxpayers? I live just north of the Show-Me State Solar Project, and road conditions have significantly deteriorated since construction began, including potholes, road failures, and inadequate repairs.
7. What is the anticipated process for supplying sufficient power to the data center? In several other states, data center projects have required the use of eminent domain to construct new transmission infrastructure. Should residents expect that possibility with this project?
8. A data center representative stated that the facility would use approximately 1.4 million gallons of water annually. How much water will be required for the initial fill, and what potential impacts could result from drawing that volume of water over a short period?
9. Regarding tax abatements and Chapter 100 agreements, if Crusoe were to sell the data center to another company, would those agreements remain in effect, or would they need to be renegotiated?

Thank you for your time and attention to these questions. I look forward to reviewing your responses.

Sincerely,

Joshua R. Hughes
