Dear Commissioners,

I am a resident of Fulton/Callaway Co. and I am writing to formally express my opposition to the proposed data center project in Callaway County.

While I support economic development, I believe AI data centers and similar business projects present significant risks to our community.

My concerns include:

1. Environmental Impact: The potential for excessive water consumption and noise pollution from cooling systems and generators.
2. Grid Reliability: The immense energy demands could cause utility rates to rise for local residents.
3. Land Use: This project does not align with the rural/residential character of our area, disrupting agricultural land and local wildlife.

While these facilities provide tax revenue, they are intense industrial users that no one wants in their backyard.

Sincerely,

Craig Roost
