Subject: Opposition to Callaway Data Center

Dear Commissioner Scott,

I am a resident of Fulton, Mo and I am writing to formally express my opposition to the proposed data center project in Callaway County, unless proper protections for the community are in place.

While I support economic development, I believe AI data centers and similar business projects present significant risks to our community that must be properly mitigated.

My concerns include:

1. **Environmental Impact:** The potential for excessive water consumption and noise pollution from cooling systems and generators.
2. **Grid Reliability:** The immense energy demands could cause utility rates to rise for local residents.
3. **Land Use:** This project does not align with the rural/residential character of our area, disrupting agricultural land and local wildlife.

While these facilities provide tax revenue, they are intense industrial users that require careful

regulation to be "good neighbors". At a minimum, please consider the following when evaluating new proposals:

- * Mandating noise mitigation: Restricting chiller operations to meet noise limits at property lines.
- * Environmental Protection: Prohibiting projects in floodplains or areas with high water tables, and regulating water and electric usage such that it does not impact the availability or costs of these basic utilities for the citizens of the surrounding communities.
- * Thermal Pollution Study: Evaluating the impact of "heat domes" on surrounding agriculture.

At minimum, I urge the commission to institute a moratorium to conduct a comprehensive impact study before approving any such project.

Sincerely,
Trena Hoskins
5058 Pendergras Rd.
Fulton Mo 65251

Subject: Northern Callaway Data Center Project

Good afternoon,

I was unable to attend yesterday's data center meeting; however, I was able to watch the recap and have several questions following the meeting.

I am seeking information not only about the proposed project (even if it is still in the early stages), but also about the commission's plans to address the potential impacts of the project on the community.

1. What does the commission anticipate the long-term effects on property values will be?
2. What are the anticipated environmental impacts of this type of construction and operation (e.g, effects on local wildlife, waste removal, light pollution, noise pollution, and potential health concerns for local residents)?
3. What studies or research has the commission conducted regarding the potential impacts of the data center? While I understand commissioners have visited a data center in Texas, what independent or unbiased research has been completed, or is planned, to

ensure that local residents' interests are protected?

4. Commissioners traveled to Texas to view a data center. Was this trip funded by the data center company, or was it paid for by the commission or individual commissioners?
5. The commission has invested time and resources to visit a data center in Texas, yet there appeared to be no answer regarding water allocation priorities in the event of a severe drought. Has the commission begun coordinating with the local water district and electrical cooperative to address these types of issues? If not, what is the timeline for doing so?
6. What plans are in place to address road conditions during and after construction? Who will be responsible for the associated costs, Crusoe or local taxpayers? I live just north of the Show-Me State Solar Project, and road conditions have significantly deteriorated since construction began, including potholes, road failures, and inadequate repairs.
7. What is the anticipated process for supplying sufficient power to the data center? In several other states, data center projects have required the use of eminent domain to construct new transmission infrastructure. Should residents expect that possibility with this project?
8. A data center representative stated that the facility would use approximately 1.4 million gallons of water annually. How much water will be required for the initial fill, and what potential impacts could result from drawing that volume of water over a short period?
9. Regarding tax abatements and Chapter 100 agreements, if Crusoe were to sell the data center to another company, would those agreements remain in effect, or would they need to be renegotiated?

Thank you for your time and attention to these questions. I look forward to reviewing your responses.

Sincerely,

Joshua R. Hughes

Hi Chris,

I'm reaching out with strong concerns about Hyperscale Data Centers.

First, we must be VERY vigilant about ensuring MO and the US does not allow our precious farm land to be taken over - this is our future - food preservation. We certainly can't make more of it.

Most people that live in Callaway County are here to get away from NOISE, LIGHTS, Harmful Frequencies, WATER POLLUTION, and overall just want to go home set on our front porch and breath.

We've been fighting, and continue to fight, against the Farmland stolen out from under us by Solar Farm companies - these will be in my backyard. We do not want or need the money from these intrusive companies. I'll leave it at this, but I will provide a document you may find useful.

If you are further interested in how Callaway and New Bloomfield residents feel on this topic - I invite you to two Facebook pages:

Subject: Urgent request to halt all progress on data centers in Callaway County

Dear Commissioner Scott,

I am a 15 year resident of Fulton and I am writing to formally express my opposition to the proposed data center project in Callaway County, unless proper protections for the community are in place.

While I support economic development, I believe AI data centers and similar business projects present significant risks to our community that must be properly mitigated.

My concerns include:

1. Environmental Impact: The potential for excessive water consumption and noise pollution from cooling systems and generators.
2. Grid Reliability: The immense energy demands could cause utility rates to rise for local residents.
3. Land Use: This project does not align with the rural/residential character of our area, disrupting agricultural land and local wildlife.

While these facilities provide tax revenue, they are intense industrial users that require careful regulation to be "good neighbors". At a minimum, please consider the following when evaluating new proposals:

- * Mandating noise mitigation: Restricting chiller operations to meet noise limits at property lines.
- * Environmental Protection: Prohibiting projects in floodplains or areas with high water tables, and regulating water and electric usage such that it does not impact the availability or costs of these basic utilities for the citizens of the surrounding communities.
- * Thermal Pollution Study: Evaluating the impact of "heat domes" on surrounding agriculture.

At minimum, I urge the commission to institute a moratorium to conduct a comprehensive impact study before approving any such project.

Mr. Scott, I have children to think about not to mention those that are health compromised and elderly. I am implore you to stop this. Please listen to your constituents.

Sincerely,
Amanda Mae Kerr

To Curt Warfield <cwarfield@callawaycounty.org>

Dear Commissioner Warfield,

I am a 15 year resident of Fulton and I am writing to formally express my opposition to the proposed data center project in Callaway County, unless proper protections for the community are in place.

While I support economic development, I believe AI data centers and similar business projects present significant risks to our community that must be properly mitigated.

My concerns include:

1. Environmental Impact: The potential for excessive water consumption and noise pollution from cooling systems and generators.
2. Grid Reliability: The immense energy demands could cause utility rates to rise for local residents.
3. Land Use: This project does not align with the rural/residential character of our area, disrupting agricultural land and local wildlife.

While these facilities provide tax revenue, they are intense industrial users that require careful regulation to be "good neighbors". At a minimum, please consider the following when evaluating new proposals:

- * Mandating noise mitigation: Restricting chiller operations to meet noise limits at property lines.
- * Environmental Protection: Prohibiting projects in floodplains or areas with high water tables, and regulating water and electric usage such that it does not impact the availability or costs of these basic utilities for the citizens of the surrounding communities.
- * Thermal Pollution Study: Evaluating the impact of "heat domes" on surrounding agriculture.

At minimum, I urge the commission to institute a moratorium to conduct a comprehensive impact study before approving any such project.

Mr. Warfield, I have children to think about not to mention those that are health compromised and elderly. I am implore you to stop this. Please listen to your constituents.

Sincerely,

Amanda Mae Kerr

Thank you so much for getting back with me, Mr. Warfield. What are your leaning toward a data center? Are you for or against it coming to Callaway County?

Commissioner Warfield,

Thank you for emailing me back, sir. With resources like clean water and soil on the line, it's hard to understand remaining neutral. I do appreciate the commission seeking further education. Again, thank you for the response. I believe I speak for the majority of Callaway County constituents in saying that we do not want data centers in our county.

On May 21, 2026, at 11:07 AM, Curt Warfield <cwarfield@callawaycounty.org> wrote:

Good morning, Amanda. I think it is fair for me to say right now that the Commission are the same as most people; we are educating ourselves on these issues. I have to remain in a neutral position as I also have constituents as proponents as well. The more comes available and the more we know, the public will know, and people will have the opportunity to have a say. NDAs, there will not be any in regard to Data Centers. Thank you for your email, Amanda.

Wanted to send this again. After Governor Kehoe's announcement today, I am even more concerned. He is not listening to the people of Missouri. I hope that you as our commissioner will listen to your constituents.

My previous response:

Urgent: please halt any progress of data centers in Callaway County
