
Concerns regarding the proposed data center in Callaway County

From Candace Latham <clatham@ktis.net>

Date Fri 2026-05-15 11:53 AM

To Curt Warfield <cwarfield@callawaycounty.org>; Gary Jungermann <GJungermann@Callawaycounty.org>; Christopher Scott <cscott@callawaycounty.org>

Good afternoon,

I would like to share my concerns regarding the proposed data center development in Callaway County. Although I understand the importance of attracting new business and investment, I do not believe this project is the right fit for our community in its current form.

There are several issues that I feel deserve closer attention before any approvals move forward:

1. Environmental Concerns – Large-scale data centers can consume enormous amounts of water and create ongoing noise from cooling equipment and backup generators, which may negatively affect nearby residents and wildlife.
2. Energy Demand – The substantial electricity requirements associated with these facilities could place added strain on the power grid and potentially increase utility costs for local households.
3. Community and Land Impact – Callaway County's rural character and agricultural landscape are important to many residents. A project of this scale could permanently alter the area and disrupt farmland and natural habitats.

While tax revenue and economic growth are often cited as benefits, developments of this magnitude should be held to strict standards to ensure they do not negatively impact surrounding communities.

At a minimum, I encourage the commission to consider the following safeguards:

- Strong noise-control requirements to limit disturbance to neighboring properties.
- Restrictions against construction in flood-prone areas or locations with sensitive water resources.
- Oversight of water and power consumption to protect availability and affordability for local residents.
- An independent study examining possible heat-related effects on nearby farmland and agriculture.

I respectfully ask the commission to either deny this proposal or delay consideration until a full environmental and community impact review can be completed.

Thank you for your time and consideration.

Sincerely,

Candace Latham
7028 State Rd. T

Re: No data farms!

From Christopher Scott <cscott@callawaycounty.org>

Date Fri 5/15/2026 11:10 AM

To Katie L. <kjbwwu@yahoo.com>

Katie,

As your Western District Commissioner, I appreciate your email expressing your concerns over the data center discussions in Callaway County.

While I work to stay educated on current topics as your County leader, I always wish to temper the industry chatter with local input. The data center topic is one of the latest - and one of the loudest - topics being discussed today in Callaway County and in our neighboring counties.

As your elected commissioners, we are tasked with making the best of the situation. However, we will enter the county into a great deal of legal jeopardy with any attempt to limit who and what business can be conducted in our county.

I do greatly appreciate your list of suggested considerations including noise abatement, environmental protection, and thermal pollution.

I appreciate you taking the time to send your email. Please know that you have been heard. If you would like to discuss further, I would welcome either a telephone discussion or an in-person chat. My contact info is all available in the email signature below.

Subject: No data farms!

Dear Commissioner Scott,

I am a resident of New Bloomfield, and I am writing to formally express my opposition to the proposed data center project in Callaway County.

While I support economic development, I believe this specific project poses significant risks to our community.

My concerns include:

1. Environmental Impact: The potential for excessive water consumption and noise pollution from cooling systems and generators.
2. Grid Reliability: The immense energy demands could cause utility rates to rise for local residents.
3. Land Use: This project does not align with the rural/residential character of our area, disrupting agricultural land and local wildlife.

While these facilities provide tax revenue, they are intense industrial users that require careful regulation to be "good neighbors". At a minimum, please consider the following when evaluating new proposals:

- * Mandating noise mitigation: Restricting chiller operations to meet noise limits at property lines.
- * Environmental Protection: Prohibiting projects in floodplains or areas with high water tables, and regulating water and electric usage such that it does not impact the availability or costs of these basic utilities for the citizens of the surrounding communities.
- * Thermal Pollution Study: Evaluating the impact of "heat domes" on surrounding agriculture.

I urge the commission to reject this proposal or, at minimum, institute a moratorium to conduct a comprehensive impact study.

Sincerely,

Katie Lawrence

Dear Commissioners and Mr. Schulte ,

I am a resident of Callaway County and I am writing to formally express my opposition to the proposed data center project in Callaway County, unless proper protections for the community are in place.

While I support economic development, I believe AI data centers and similar business projects present significant risks to our community that must be properly mitigated.

My concerns include:

1. Environmental Impact: The potential for excessive water consumption and noise pollution from cooling systems and generators.
2. Grid Reliability: The immense energy demands could cause utility rates to rise for local residents.
3. Land Use: This project does not align with the rural/residential character of our area, disrupting agricultural land and local wildlife.
4. The tax implications to current residents due to the previous tax breaks centers have received.

While these facilities provide tax revenue, they are intense industrial users that require careful regulation to be "good neighbors". At a minimum, please consider the following when evaluating new proposals:

- * Mandating noise mitigation: Restricting chiller operations to meet noise limits at property lines.
- * Environmental Protection: Prohibiting projects in floodplains or areas with high water tables, and regulating water and electric usage such that it does not impact the availability or costs of these basic utilities for the citizens of the surrounding communities.
- * Thermal Pollution Study: Evaluating the impact of "heat domes" on surrounding agriculture.

At minimum, I urge the commission to institute a moratorium to conduct a comprehensive impact study before approving any such project.

Subject: Urgent Concerns Regarding Proposed Data Center in Callaway County

Dear Commissioner Jungermann,

My name is Darien McFadden, I'm a resident of Fulton, Missouri. I am writing to formally express my opposition to the proposed data center project in Callaway County.

Callaway County is one of the most beautiful places in our state. We are rich with history in our soil. We have been ranked one of the best places to live in Missouri numerous times the past decade, partially because of our wonderful environment and the people that help keep it beautiful.

The environmental concerns of these Data Centers is astronomical. I ask of you to please look into how the land and people have been suffering in areas that have been taken over by these

centers like in Ohio, where the Ohio River Protection Agency immediately raised concerns about the chemicals found in their waters from the "closed loop" systems. They're now fighting with the EPA after the EPA proposed lowering their standards to accommodate & proposed that the centers begin dumping the wastewater into local streams and lakes.

(You can look into their local news station 614Now to find articles pertaining to their struggle)

It would be dreadful for our beautiful county to be ruined in this way.

Among the environmental concerns, I know I share concerns with other members of the community

2. Grid Reliability: The immense energy demands could cause utility rates to rise for local residents.

And

3. Land Use: This project does not align with the rural/residential character of our area, disrupting agricultural land and local wildlife.

While these facilities provide tax revenue, they are intense industrial users that require careful regulation to be "good neighbors". At a minimum, please consider the following when evaluating new proposals:

- * Mandating noise mitigation: Restricting chiller operations to meet noise limits at property lines.
- * Environmental Protection: Prohibiting projects in floodplains or areas with high water tables, and regulating water and electric usage such that it does not impact the availability or costs of these basic utilities for the citizens of the surrounding communities.
- * Thermal Pollution Study: Evaluating the impact of "heat domes" on surrounding agriculture.

I urge the commission to reject this proposal or, at minimum, institute a moratorium to conduct a comprehensive impact study.

Data center opposition

From Allison Pawlish <fairyfly500@gmail.com>

Date Wed 2026-05-20 11:10 AM

To Curt Warfield <cwarfield@callawaycounty.org>

Dear Curt Warfield,

I am a resident of Callaway County, and I am writing to formally express my opposition to the proposed data center project in our community.

While I support responsible economic growth, I believe this particular project presents significant concerns for local residents and the long-term wellbeing of our county.

Some of my primary concerns include:

1. Environmental Impact – The potential for excessive water usage, increased noise pollution from cooling systems and generators, and other environmental strain on surrounding areas.
2. Utility and Grid Reliability – The substantial energy demands of a large-scale data center could place added pressure on local infrastructure and potentially increase utility costs for residents.
3. Land Use and Community Character – This type of industrial development does not align with the rural and residential nature of our area. It may negatively impact agricultural land, wildlife habitats, and the overall character of the community.

While projects like this may generate tax revenue, they are also intensive industrial operations that require strong oversight and regulation to ensure they do not negatively affect surrounding communities. At a minimum, I urge the commission to consider the following safeguards when evaluating any future proposals:

- * Requiring effective noise mitigation measures to ensure operations remain within acceptable limits at surrounding property lines.
- * Protecting environmentally sensitive areas by prohibiting construction in floodplains or regions with high water tables.
- * Regulating water and electrical usage to ensure local residents are not impacted by increased costs or reduced availability of essential utilities.
- * Conducting a thorough study on potential thermal pollution and the effects of “heat domes” on nearby agriculture and ecosystems.

I respectfully urge the commission to reject this proposal or, at the very least, establish a moratorium until a comprehensive environmental and community impact study can be completed.

Thank you for your time and consideration.

Sincerely,
Allison Pawlish

- * Environmental Protection: Prohibiting projects in floodplains or areas with high water tables, and regulating water and electric usage such that it does not impact the availability or costs of these basic utilities for the citizens of the surrounding communities.
- * Thermal Pollution Study: Evaluating the impact of "heat domes" on surrounding agriculture.

I urge the commission to reject this proposal or, at minimum, institute a moratorium to conduct a comprehensive impact study.

Sincerely,
Hanna Rustemeyer

Subject: Opposition of Callaway County Data Center Project

Dear Commissioner Scott

I am a resident of Callaway County in Fulton, Mo and I am writing to formally express my opposition to the proposed data center project in Callaway County, unless proper protections for the community are in place.

While I support economic development, I believe AI data centers and similar business projects present significant risks to our community that must be properly mitigated.

My concerns include:

1. **Environmental Impact:** The potential for excessive water consumption and noise pollution from cooling systems and generators.
2. **Grid Reliability:** The immense energy demands could cause utility rates to rise for local residents.
3. **Land Use:** This project does not align with the rural/residential character of our area, disrupting agricultural land and local wildlife.

While these facilities provide tax revenue, they are intense industrial users that require careful regulation to be "good neighbors". At a minimum, please consider the following when evaluating new proposals:

- * Mandating noise mitigation: Restricting chiller operations to meet noise limits at property lines.
- * Environmental Protection: Prohibiting projects in floodplains or areas with high water tables, and regulating water and electric usage such that it does not impact the availability or costs of these basic utilities for the citizens of the surrounding communities.
- * Thermal Pollution Study: Evaluating the impact of "heat domes" on surrounding agriculture.

At minimum, I urge the commission to institute a moratorium to conduct a comprehensive impact study before approving any such project.

Respectfully,

Samantha Rustemeyer
