Re: Data Center concerns in Callaway County

From Christopher Scott <cscott@callawaycounty.org>

Date Mon 5/18/2026 2:13 PM

To Dani Stratton <dstratt08@gmail.com>

Cc Gary Jungermann <GJungermann@Callawaycounty.org>; Curt Warfield <cwarfield@callawaycounty.org>

Dani,

Any items on the Commission agenda are open to the public. The business agendas of the Commission are posted daily (24-hour advanced notice requirement) and are available on the Callaway County website <https://callawaycounty.org/commission/>.

You asked about me:

I have 3 grown children, all raised here in Callaway County, and no grandchildren yet. That is part of why I ran for the Commission office - I am by my nature and profession a planner, and I want to protect the future of our county for my grandchildren-yet-come, for your grandchildren, and many generations to come.

You asked about benefits:

The local benefits of the data centers center around requiring the data center developers to maintain a minimum number of jobs and to pay taxes. These two points are highly contentious in public comment and highly negotiable when talking with data center developers. The jobs are required to be maintained in order to qualify for tax abatements. The taxes that these data centers do pay may be used to fund local school districts, local fire districts, community improvement projects, public protection projects, and other projects to promote the growth and financial stability of the county for many years to come.

Are the trade-offs worth the data center presence...? The Commission is working hard to educate ourselves, evaluate data center construction and operations from around the country in the attempt to determine the detailed impacts on our county, specifically. In order to make sound decisions, the Commission needs factual, specific data about our situation. Not all data centers are alike - they are constantly evolving in technology used in their construction and cooling systems.

Until Callaway-specific project facts are made known - to this Commission and to the public, there can be no meaningful discussions that will foster a fertile decision-making environment. Until that time, discussions can only contain generalities which may possibly have little or no basis in any proposed Callaway County project.

Thank you for your concern and for your input.

Subject: Re: Data Center concerns in Callaway County

Christopher,

Thank you for your response! I don't know that I need to discuss much more at this point.

Will discussions about this data center be open to the public? From what I understand, many have been approved in other communities under the nose of their residents.

Forgive me, commissioner, as I do not know much about you. For example, I do not know if you have children or grandchildren. I personally have three young children; the oldest is just wrapping up her last week of kindergarten, and the youngest is on the cusp of learning to walk, turning one this summer.

Naturally, I want the best for my kids and am passionate about securing the best future as possible for them. It sounds like these data centers are not in the best interests of the communities they are placed into, and will instead tax finite resources. Are there local benefits that I am unaware of?

With Gratitude,

Dani Stratton

Subject: Data Center concerns in Callaway County

Dear Commissioners,

I am a resident of Fulton, MO and I am writing to formally express my opposition to the proposed (and future proposals of) data center project(s) in Callaway County.

While I support economic development, I believe this specific project poses significant risks to our community.

My concerns include:

1. Environmental Impact: The potential for excessive water consumption and noise pollution from cooling systems and generators.
2. Grid Reliability: The immense energy demands could cause utility rates to rise for local residents.
3. Land Use: This project does not align with the rural/residential character of our area, disrupting agricultural land and local wildlife.

While these facilities provide tax revenue, they are intense industrial users that require careful regulation to be "good neighbors". At a minimum, please consider the following when evaluating new proposals:

- * Mandating noise mitigation: Restricting chiller operations to meet noise limits at property lines.
- * Environmental Protection: Prohibiting projects in floodplains or areas with high water tables, and regulating water and electric usage such that it does not impact the availability or costs of these basic utilities for the citizens of the surrounding communities.
- * Thermal Pollution Study: Evaluating the impact of "heat domes" on surrounding agriculture.

I urge the commission to reject this proposal or, at minimum, institute a moratorium to conduct a comprehensive impact study.

Sincerely,

Dani Stratton

Letter of concern regarding data center

From Taeler Thompson <littleidixie93@gmail.com>

Date Thu 2026-05-28 1:26 PM

To gjungermann@callawaycounty.org <gjungermann@callawaycounty.org>; Christopher Scott <cscott@callawaycounty.org>; Curt Warfield <cwarfield@callawaycounty.org>

Dear Commissioners,

I am a resident of Auxvasse, Callaway County, and I am writing to formally express my opposition to the proposed data center project in Callaway County, unless proper protections for the community are in place.

While I support economic development, I believe AI data centers and similar business projects present significant risks to our community that must be properly mitigated.

My concerns, like many others, include:

1. **Environmental Impact:** The potential for excessive water consumption and noise pollution from cooling systems and generators. Not to mention the potential for pollution that is vehemently argued regardless of Big AI's gaslighting and diminishing circumstances where this has occurred despite promises of a "closed loop" system.
2. **Grid Reliability:** The immense energy demands could cause utility rates to rise for local residents.
3. **Land Use:** This project does not align with the rural/residential character of our area, disrupting agricultural land and local wildlife.

While these facilities provide tax revenue (or should if proper provisions are put in place rather than abatements, credits, etc), they are intense industrial users that require careful regulation to be "good neighbors". At a minimum, please consider the following when evaluating new proposals:

- * **Mandating noise mitigation:** Restricting chiller operations to meet noise limits at property lines.
- * **Environmental Protection:** Prohibiting projects in floodplains or areas with high water tables, and regulating water and electric usage such that it does not impact the availability or costs of these basic utilities for the citizens of the surrounding communities.
- * **Thermal Pollution Study:** Evaluating the impact of "heat domes" on surrounding agriculture.

At minimum, I urge the commission to institute a moratorium to conduct a comprehensive impact study before approving any such project.

I have heard of a possibility of a public meeting being floated and I think that would be an excellent idea! I would be more than happy to write another petition for the community as I did concerning "the kingdom of callaway" on the justice building... but with the lack of information available it is difficult to understand what may or may not be going on well enough to write a petition. Especially as a pregnant, homeschooling mom of 4. A public meeting would be greatly appreciated and I sincerely hope you hear from more of the community or, at a minimum, make more of an effort to keep them

informed about something as impactful to us as this would be.

Sincerely,
Taeler Crowson

Subject: Data Center Forum Follow-up -- More info on water

Dear Commissioners:

Thank you for your input into the June 15 forum covering data centers coming into Callaway County. It is great that real public outreach is occurring early in the process.

I came across this information about water usage concerns by data centers, and I thought I should share it with you. It might give some ideas for discussions with the developers of these sites.

I hope this information is useful. Good luck! I hope you can create a win-win for the citizens and the developers as these projects move forward in development.

Best regards,
Cathy Vogelweid

Hi Cathy, that was determined to be false information that was provided by that group and I think they retracted it. It was sourced by Loopnet that is a marketing ploy for development. I spoke with the actual realtor and said there was no sale, no lease.

Hi Curt,

You are welcome.

I am attaching a real-estate listing for the large Kingdom City site. It gives a lot more detailed information than what was shared at the Forum on June 15.

It was posted on FB, so you can be sure that everyone opposed to these data centers that also visits the various opposition sites on social media are going to see it.

I don't want to see you get blind-sided at the next public meeting.

Regards,

Cathy Vogelweid

Data centers

From pgswood <pgswood@ktis.net>

Date Mon 2026-05-25 9:08 AM

To Curt Warfield <cwarfield@callawaycounty.org>

Dear Commissioner Mr. Warfield,

I am a resident of Mokane Mo and I am writing to formally express my opposition to the proposed data center project in Callaway County.

While I support economic development, I believe AI data centers and similar business projects present significant risks to our community that must be properly mitigated.

*****A large data center can actually use as 3 times as much power as the Callaway Plant produces. Even a small plant using half the Callaway Plant's production is not sustainable, not for us or the country as a whole. Electric rates won't only rise, there will be places taking blackouts. With another coal plant coming down when it's license is up, which is happening as early as 2031. Our power grid is already in jeopardy. This cannot be made up with solar. To put this in perspective it would take 11,500 acres of solar panels to replace the amount of power Callaway produces. So these company's saying they'll use solar to offset their massive power usage is not feasible. Then if you read the water table issues that other areas have had, this becomes quite scary.*****

My concerns include:

1. Environmental Impact: The potential for excessive water consumption and noise pollution from cooling systems and generators.
2. Grid Reliability: The immense energy demands could cause utility rates to rise for local residents.
3. Land Use: This project does not align with the rural/residential character of our area, disrupting agricultural land and local wildlife.

While these facilities provide tax revenue, they are intense industrial users that require careful regulation to be "good neighbors". At a minimum, please consider the following when evaluating new proposals:

With another coal plant coming down when it's license is up, which is happening as early as 2031. Our power grid is already in jeopardy. This cannot be made up with solar. To put this in perspective it would take 11,500 acres of solar panels to replace the amount of power Callaway produces. So these company's saying they'll use solar to offset their massive power usage is not feasible. Then if you read the water table issues that other areas have had, this becomes quite scary.*****

My concerns include:

1. Environmental Impact: The potential for excessive water consumption and noise pollution from cooling systems and generators.
2. Grid Reliability: The immense energy demands could cause utility rates to rise for local residents.
3. Land Use: This project does not align with the rural/residential character of our area, disrupting agricultural land and local wildlife.

While these facilities provide tax revenue, they are intense industrial users that require careful regulation to be "good neighbors". At a minimum, please consider the following when evaluating new proposals:

- * Mandating noise mitigation: Restricting chiller operations to meet noise limits at property lines.
- * Environmental Protection: Prohibiting projects in floodplains or areas with high water tables, and regulating water and electric usage such that it does not impact the availability or costs of these basic utilities for the citizens of the surrounding communities.
- * Thermal Pollution Study: Evaluating the impact of "heat domes" on surrounding agriculture.

At minimum, I urge the commission to institute a moratorium to conduct a comprehensive impact study before approving any such project.

Sincerely,
Patti Wood

Subject: Urgent Concerns Regarding Proposed Data Center in Callaway County MO

Dear Commissioners

I am a resident of [Your Neighborhood/Town] and I am writing to formally express my opposition to the proposed data center project in Callaway County, unless proper protections for the community are in place.

While I support economic development, I believe AI data centers and similar business projects present significant risks to our community that must be properly mitigated.

My concerns include:

1. Environmental Impact: The potential for excessive water consumption and noise pollution from cooling systems and generators.
2. Grid Reliability: The immense energy demands could cause utility rates to rise for local residents.
3. Land Use: This project does not align with the rural/residential character of our area, disrupting agricultural land and local wildlife.

While these facilities provide tax revenue, they are intense industrial users that require careful regulation to be "good neighbors". At a minimum, please consider the following when evaluating new proposals:
