Re: Proposed Chapter 100 Industrial Development Revenue Bond Agreement – Crusoe Technologies Data Center Project, Callaway County, Missouri

Dear Callaway County Commissioners:

Crusoe Technologies LLC ("Crusoe") is pleased to present this formal request for a Chapter 100 Industrial Development Revenue Bond ("Chapter 100") agreement with Callaway County, Missouri. Crusoe is a technology infrastructure company focused on purpose-built, sustainable data centers and high-performance computing facilities. We are actively evaluating Callaway County as the site for a significant capital investment that would bring lasting economic and fiscal benefits to the region.

We respectfully propose the following terms and set forth below our substantive justifications for those terms, along with a summary of the projected fiscal impact ("85% PDF").

I. PROPOSED CHAPTER 100 TERMS

Agreement Term: 25 years from the date of project completion.

Abatement Percentage: 85% abatement on real property and personal property taxes assessed against the project during the agreement term.

Property Subject to Abatement: All real property comprising the data center facility and associated on-site improvements, and all personal property, including servers, networking equipment, and other qualifying tangible personal property placed in service at the site.

PILOT & Community Benefit Payments: Payments in Lieu of Taxes ("PILOT") and Community Benefit payments will be structured in collaboration with the taxing jurisdictions to direct meaningful, recurring revenue to the community.

Jobs Commitment: Crusoe shall commit to creating and maintaining an agreed upon minimum number of full-time equivalent jobs at the facility, with an average annual wage equal to or exceeding 150% of the average annual wage in Callaway County, as determined by reference to applicable Missouri Department of Economic Development data.

Fees: Crusoe shall be responsible for reasonable and documented legal fees and expenses of the County related to the Project, including Gilmore & Bell, P.C., bond counsel to the County, and the selected bond trustee.

II. PROJECTED FISCAL IMPACT

The following table summarizes the projected tax revenue to local taxing jurisdictions, based on the estimated assessed value of the project. These figures will flow directly to local taxing jurisdictions each year, plus any Community Benefit payments negotiated as part of the Chapter 100 structure. The figures presented below are preliminary, illustrative estimates only and do not constitute a representation, warranty, or commitment by Crusoe as to actual tax revenue that will be generated by the project. These estimates are based on assumptions regarding capital investment, facility configuration, end-user tenant requirements, and assessment methodology, any of which may change. Actual results may differ materially. Please review the disclaimer following the table for additional detail.

Fiscal Impact Metric Years 1-30	Estimated Value
Average Annual Tax Revenue (all jurisdictions)	~\$104.5 million
Total Tax Revenue (all jurisdictions)	~\$3.1 billion
Increase to School District 2024 Baseline Revenue	~+435%
Increase to Callaway County 2025 Baseline Revenue	~+30%

Disclaimer: All tax revenue figures presented in this proposal are estimates only and are subject to change depending on market conditions, the requirements of the end-user tenant, the final design and configuration of the facility, the total capital investment deployed, and the application of Callaway County Assessor rules and assessment practices.

III. JUSTIFICATION FOR PROPOSED TERMS

Crusoe respectfully submits that the proposed 25-year term and 85% abatement are well-supported by the specific economic and development characteristics of this project and the Callaway County market. The following factors, taken together, distinguish this project from sites in competing jurisdictions:

1. Higher Property Tax Rate Than Comparable Sites

Callaway County's effective property tax rate on commercial and industrial real and personal property is materially higher than that of comparable data center sites under active consideration in Missouri and the nation. The 85% abatement corrects for this structural cost disparity and places the County on an equal footing with competing sites.

2. Hyperscaler Tenant Requirements & Site Competitiveness

Crusoe is pursuing a hyperscaler tenant for this facility. The tenant will be a large-scale, credit-worthy technology company with the financial capacity to make substantial ongoing investments in GPU and computing infrastructure at the site. Hyperscaler tenants operate under rigorous internal return-on-capital frameworks and evaluate competing sites on a total-cost-of-ownership basis. An abatement structure that keeps the all-in occupancy cost competitive is often a threshold requirement for site selection. Securing such a tenant is critical not only to the viability of this project, but to maximizing the long-term capital investment and associated economic activity in Callaway County.

3. Higher Utility & Transmission Costs

Data center operations are energy-intensive. The utility and transmission cost structure for this prospective project is higher than in certain competing markets, adding meaningful operating cost pressure to the project on an annual basis.

4. Higher Public Improvement Costs

Development of this site will require significant public infrastructure improvements. These include road improvements to accommodate the construction traffic and ongoing operational logistics associated with a data center campus, as well as a necessary waterline upgrade to ensure adequate water supply and pressure for cooling and fire suppression systems. These capital costs, borne directly by Crusoe, represent a real and material cost to develop the project.

5. Structuring Payments to Keep Money Local

The Chapter 100 structure affords considerable flexibility in how PILOT and Community Benefit payments are allocated and directed. Crusoe is committed to working collaboratively with Callaway County and the other taxing jurisdictions to design a payment structure that is consistent with applicable law and delivers meaningful, recurring revenue to local entities.

6. Comparable Data Center Chapter 100 Agreement terms in Missouri

Crusoe believes the proposed abatement terms are more competitive and result in higher community benefit than other recently approved Chapter 100 Bond Agreements. For example:

- **Nebius — Independence, Missouri (Jackson County) Approved March 2026**
 - 20-year term at 98% abatement for both real and 90% abatement for personal property taxes
- **Mica — Kansas City, Missouri (Port KC) Approved in July 2025**
 - 25-year term with a 75% abatement on real and personal property taxes, complemented by a 100% sales tax exemption for all construction materials and project equipment.

IV. NEXT STEPS

Crusoe welcomes the opportunity to present these terms in greater detail to the Commission and its advisors and to work cooperatively toward a mutually beneficial agreement. We are prepared to engage directly with any relevant stakeholders to advance this process and work collaboratively with the community.

We look forward to a continued and productive dialogue regarding this important investment opportunity for Callaway County. Please do not hesitate to contact us at your earliest convenience.

Respectfully submitted,

Crusoe Technologies LLC
