To Curt Warfield <cwarfield@callawaycounty.org>

Commissioner Warfield,

Thank you for emailing me back, sir. With resources like clean water and soil on the line, it's hard to understand remaining neutral. I do appreciate the commission seeking further education. Again, thank you for the response. I believe I speak for the majority of Callaway County constituents in saying that we do not want data centers in our county.

Good morning, Amanda. I think it is fair for me to say right now that the Commission are the same as most people; we are educating ourselves on these issues. I have to remain in a neutral position as I also have constituents as proponents as well. The more comes available and the more we know, the public will know, and people will have the opportunity to have a say. NDAs, there will not be any in regard to Data Centers. Thank you for your email, Amanda.

Curt Warfield

Callaway County Eastern District Commissioner

Wanted to send this again. After Governor Kehoe's announcement today, I am even more concerned. He is not listening to the people of Missouri. I hope that you as our commissioner will listen to your constituents.

My previous response:

at property lines.

* Environmental Protection: Prohibiting projects in floodplains or areas with high water tables, and regulating water and electric usage such that it does not impact the availability or costs of these basic utilities for the citizens of the surrounding communities.

* Thermal Pollution Study: Evaluating the impact of "heat domes" on surrounding agriculture.

At minimum, I urge the commission to institute a moratorium to conduct a comprehensive impact study before approving any such project.

Mr. Warfield, I have children to think about not to mention those that are health compromised and elderly. I am implore you to stop this. Please listen to your constituents.

Sincerely,
Amanda Mae Kerr

Thank you so much for getting back with me, Mr. Warfield. What are your leaning toward a data center? Are you for or against it coming to Callaway County?

Subject: Urgent: please halt any progress of data centers in Callaway County

Dear Commissioner Warfield,

I am a 15 year resident of Fulton and I am writing to formally express my opposition to the proposed data center project in Callaway County, unless proper protections for the community are in place.

While I support economic development, I believe AI data centers and similar business projects present significant risks to our community that must be properly mitigated.

My concerns include:

1. **Environmental Impact:** The potential for excessive water consumption and noise pollution from cooling systems and generators.
2. **Grid Reliability:** The immense energy demands could cause utility rates to rise for local residents.
3. **Land Use:** This project does not align with the rural/residential character of our area, disrupting agricultural land and local wildlife.

While these facilities provide tax revenue, they are intense industrial users that require careful regulation to be "good neighbors". At a minimum, please consider the following when evaluating new proposals:

* Mandating noise mitigation: Restricting chiller operations to meet noise limits
