Katie,

As your Western District Commissioner, I appreciate your email expressing your concerns over the data center discussions in Callaway County.

While I work to stay educated on current topics as your County leader, I always wish to temper the industry chatter with local input. The data center topic is one of the latest - and one of the loudest - topics being discussed today in Callaway County and in our neighboring counties.

As your elected commissioners, we are tasked with making the best of the situation. However, we will enter the county into a great deal of legal jeopardy with any attempt to limit who and what business can be conducted in our county.

I do greatly appreciate your list of suggested considerations including noise abatement, environmental protection, and thermal pollution.

I appreciate you taking the time to send your email. Please know that you have been heard. If you would like to discuss further, I would welcome either a telephone discussion or an in-person chat. My contact info is all available in the email signature below.

Subject: No data farms!

Dear Commissioner Scott,

I am a resident of New Bloomfield, and I am writing to formally express my opposition to the proposed data center project in Callaway County.

While I support economic development, I believe this specific project poses significant risks to our community.

My concerns include:

1. Environmental Impact: The potential for excessive water consumption and noise pollution from cooling systems and generators.
2. Grid Reliability: The immense energy demands could cause utility rates to rise for local residents.
3. Land Use: This project does not align with the rural/residential character of our area, disrupting agricultural land and local wildlife.

While these facilities provide tax revenue, they are intense industrial users that require careful regulation to be "good neighbors". At a minimum, please consider the following when evaluating new proposals:

- * Mandating noise mitigation: Restricting chiller operations to meet noise limits at property lines.
- * Environmental Protection: Prohibiting projects in floodplains or areas with high water tables, and regulating water and electric usage such that it does not impact the availability or costs of these basic utilities for the citizens of the surrounding communities.
- * Thermal Pollution Study: Evaluating the impact of "heat domes" on surrounding agriculture.

I urge the commission to reject this proposal or, at minimum, institute a moratorium to conduct a comprehensive impact study.

Sincerely,

Katie Lawrence
