To Curt Warfield <cwarfield@callawaycounty.org>

Dear Commissioner Warfield,

My name is Darien McFadden, I'm a resident of Fulton, Missouri. I am writing to formally express my opposition to the proposed data center project in Callaway County.

Callaway County is one of the most beautiful places in our state. We are rich with history in our soil. We have been ranked one of the best places to live in Missouri numerous times the past decade, partially because of our wonderful environment and the people that help keep it beautiful.

The environmental concerns of these Data Centers is astronomical. I ask of you to please look into how the land and people have been suffering in areas that have been taken over by these centers like in Ohio, where the Ohio River Protection Agency immediately raised concerns about the chemicals found in their waters from the "closed loop" systems.

They're now fighting with the EPA after the EPA proposed lowering their standards to accommodate & proposed that the centers begin dumping the wastewater into local streams and lakes. (You can look into their local news station 614Now to find articles pertaining to their struggle)

It would be dreadful for our beautiful county to be ruined in this way.

Among the environmental concerns, I know I share concerns with other members of the community

2. Grid Reliability: The immense energy demands could cause utility rates to rise for local residents.

And

3. Land Use: This project does not align with the rural/residential character of our area, disrupting agricultural land and local wildlife.

While these facilities provide tax revenue, they are intense industrial users that require careful regulation to be "good neighbors". At a minimum, please consider the following when evaluating new proposals:

- * Mandating noise mitigation: Restricting chiller operations to meet noise limits at property lines.
- * Environmental Protection: Prohibiting projects in floodplains or areas with high water tables, and regulating water and electric usage such that it does not impact the availability or costs of these basic utilities for the citizens of the surrounding communities.
- * Thermal Pollution Study: Evaluating the impact of "heat domes" on surrounding agriculture.

I urge the commission to reject this proposal or, at minimum, institute a moratorium to conduct a comprehensive impact study.

Sincerely,
Darien McFadden,
30-Year Resident of Callaway County,
609 State Highway Z
Fulton, Missouri
