To Curt Warfield <cwarfield@callawaycounty.org>

Dear Curt Warfield,

I am a resident of Callaway County, and I am writing to formally express my opposition to the proposed data center project in our community.

While I support responsible economic growth, I believe this particular project presents significant concerns for local residents and the long-term wellbeing of our county.

Some of my primary concerns include:

1. Environmental Impact – The potential for excessive water usage, increased noise pollution from cooling systems and generators, and other environmental strain on surrounding areas.
2. Utility and Grid Reliability – The substantial energy demands of a large-scale data center could place added pressure on local infrastructure and potentially increase utility costs for residents.
3. Land Use and Community Character – This type of industrial development does not align with the rural and residential nature of our area. It may negatively impact agricultural land, wildlife habitats, and the overall character of the community.

While projects like this may generate tax revenue, they are also intensive industrial operations that require strong oversight and regulation to ensure they do not negatively affect surrounding communities. At a minimum, I urge the commission to consider the following safeguards when evaluating any future proposals:

- * Requiring effective noise mitigation measures to ensure operations remain within acceptable limits at surrounding property lines.
- * Protecting environmentally sensitive areas by prohibiting construction in floodplains or regions with high water tables.
- * Regulating water and electrical usage to ensure local residents are not impacted by increased costs or reduced availability of essential utilities.
- * Conducting a thorough study on potential thermal pollution and the effects of "heat domes" on nearby agriculture and ecosystems.

I respectfully urge the commission to reject this proposal or, at the very least, establish a moratorium until a comprehensive environmental and community impact study can be completed.

Thank you for your time and consideration.

Sincerely,
Allison Pawlish
